

It hasn't any
corrosion with
water

1 - One of the advantages of our Polymer Pipe is that there is no limit to the length of Polymer Pipe .

2 - since these pipes have high mechanical properties, they have high strength .

3 - High resistance
to breaking and
cracking.

4 - Forming power and high formability is another main advantage of these pipes. For this reason, if you need to bend pipes during installation, it is better to use Polymer pipes.

5 - Buying Polymer pipes will be more economical for buyers than other pipes. If you intend to produce these types of pipes, you should know that their production cost is lower than other pipes; Because you will not need heavy and expensive equipment to make Polymer pipes. It is also better to know that these pipes can be produced up to 120 inches in diameter (and more if you need)

6 - Another thing to pay attention to is the flexibility of the process of making Polymer Pipe.

When producing these pipes, you can produce completely identical pipes with different diameters,

7 - Another thing that you should know about Polymer pipes is that if these pipes get cracked, the possibility of the crack level increasing in them is less than other pipes, and for this reason, the probability of Polymer pipes bursting is the lowest.

amazing advantage
of our Polymer Pipe is
that there is no limit to
the length of Polymer
Pipe .

Some other advantages of Polymer pipes are as follows:

- **Less pressure drop • Low air leakage • High energy efficiency • Ease of installation and operation of Polymer pipes • More economical installation cost compared to other pipes • Shorter production and delivery time compared to other pipes .**

One of the most amazing advantages of our Polymer Pipe is that there is no limit to the length of Polymer Pipe .
